The E-Voyager electric bike from Pro-Rider combines a cool looking bike with a vehicle that is comfortable to ride off road , up hill and down dale and even around the town's and cities of the UK. With top quality electric and bike components the E-Voyager is designed to transport you quickly and easily with or without assisted power.

The E-Voyager is powered by a 36 volt/ 10 amp Advanced Lithium Ion Battery. These types of batteries give up to between 700 - 800 charges and weigh all of 5 kg. When you compare this to a Lead/Acid battery with a weight of 10kg and a charging capacity of between 300 - 400 times you know you're buying a quality product.

When you're speeding down that steep slope you want to be sure you have full control of your bike this is why the E -Voyager comes with an advanced Rear disk brake system.

Built in Front and Rear Suspension ensure that it's the bike that takes the knocks and not you.

With a Seven Speed 'Quick Shift' Shimano gear system you are not limited to the speed of the electric motor. You can experience the best of both worlds, exercise and power assist.
